

Green, safe, and cost-effective crop protection

## FRUIT FLY MANIA

*Melon Fly, Mediterranean Fly, Bactocera Dorsalis, Ceratitits Cosyra*

Fruit Fly Mania is a protein which is highly attractive to both male and female fruit flies. It attracts all common species of fruit flies.

## About Fruit flies

Female fruit flies deposit their eggs in healthy fruits. The larvae that emerge in the fruit cause damage to the fruits. Fruit flies are very mobile; it is therefore difficult to control them by spraying conventional insecticides.

Fruit flies need specific proteins to survive and mature, in addition female fruit flies also need proteins to mature their eggs. Fruit Fly Mania is a protein which is highly attractive to both male and female fruit flies. It attracts all common species of fruit flies, such as African invasive fruit fly, Melon fly and Mediterranean fruit fly. It has specifically been developed for African conditions.

## Why use Fruit Fly Mania?

- Fruit Fly Mania provides an effective means to trap and kill every species of fruit flies.
- It can help control the pest without MRL or PHI issues.
- It can be used either in a trap, or mixed with an insecticide to spray on the crop.
