A UNIQUE MODE OF ACTION ON THE PLANT GENOME

*The sustainable solution for reducing
nitrogen inputs*

**Specific action
on nitrogen**

**Reduces fertilisers
use**

**Exclusive European
patent**

ECONITRATE®

FOLIAR BIOSTIMULANT

ALL CROPS

ECONITRATE[®]

FOLIAR BIOSTIMULANT

TARGET CROPS

ECONITRATE[®] is a nitrogen nutrition stimulator based on *Ascophyllum nodosum* and molybdenum. It stimulates nitrate uptake genes and improves crop yield and quality, enabling a reduction in nitrogen fertilisation.

ADVANTAGES

- **An innovative formula** resulting from 15 years of research with public institutes and universities.
- **Specific mode of action** : targets the genes responsible for nitrate absorption to increase nitrogen transport from the soil to the plant.
- *Ascophyllum nodosum* seaweed improves the transfer of nutrients within the plant.
- **Molybdenum** is involved in the fixation and use of nitrogen in the plant and ensures the proper functioning of growth mechanisms.
- **Proven efficacy** : reduces nitrogen fertilisation by at least 20% without reducing yield.

*For details and precautions for use, refer to the label.

COMPOSITION

Seaweed extract (93%), Molybdenum (0.3%), Dry matter (11%)

BENEFITS

Innovation
Unique patented technology

Savings
Less fertiliser, more yield

Quality
Co-developed with INRAE

Natural
Derived from plant organisms

APPLICATION

A single foliar application of 2L/ha, preferably when the crop needs the most nitrogen.

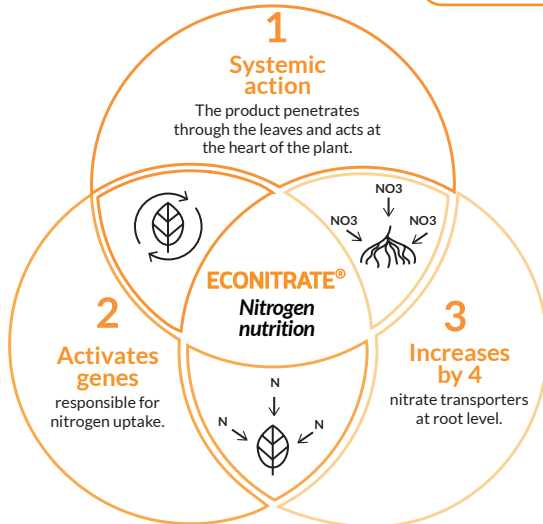

PACKAGING

Canisters : 10L, 20L

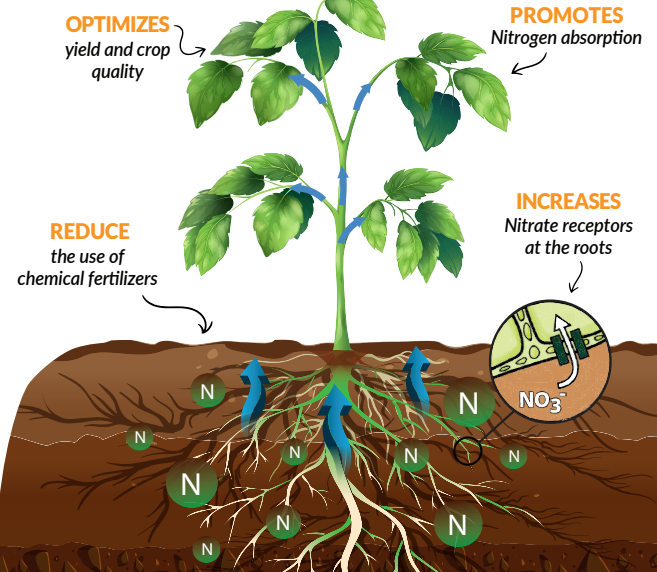

Formulation : **CS (Concentrate Suspension)**
